

Ideation Phase

Empathize & Discover

Date	30 September 2026
Team ID	SWTID-2026-5468
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Empathy Map Canvas:

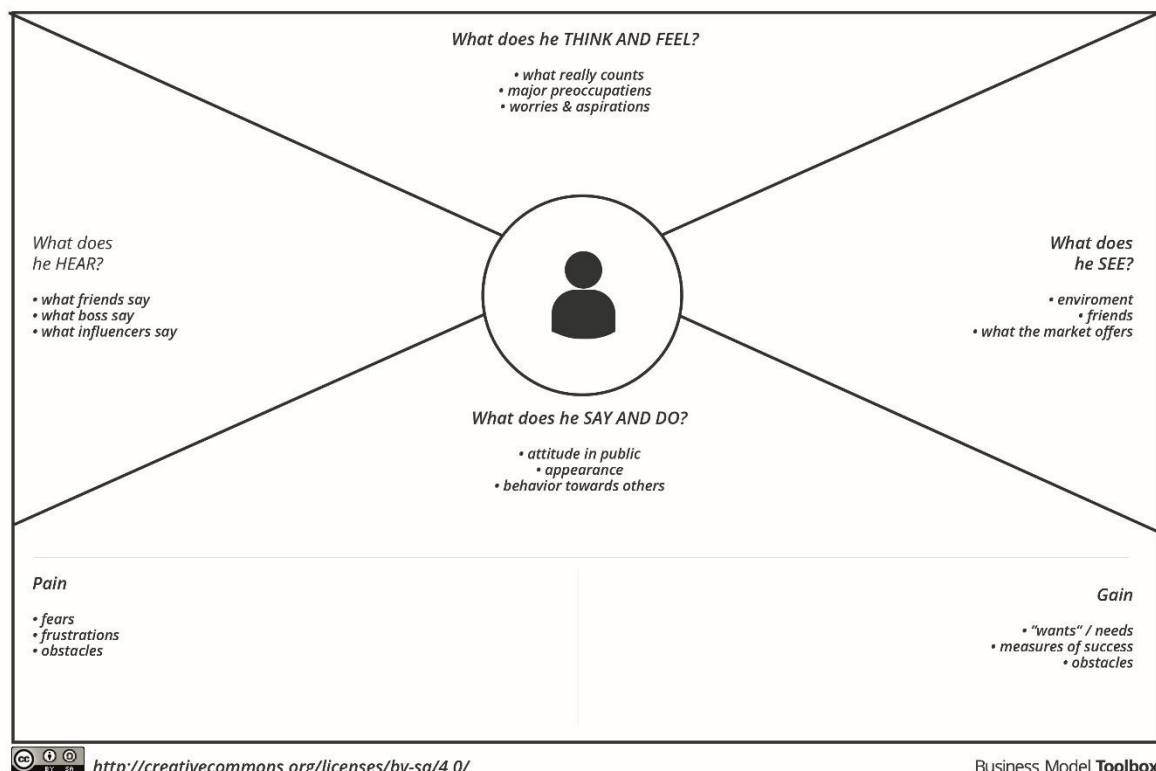

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

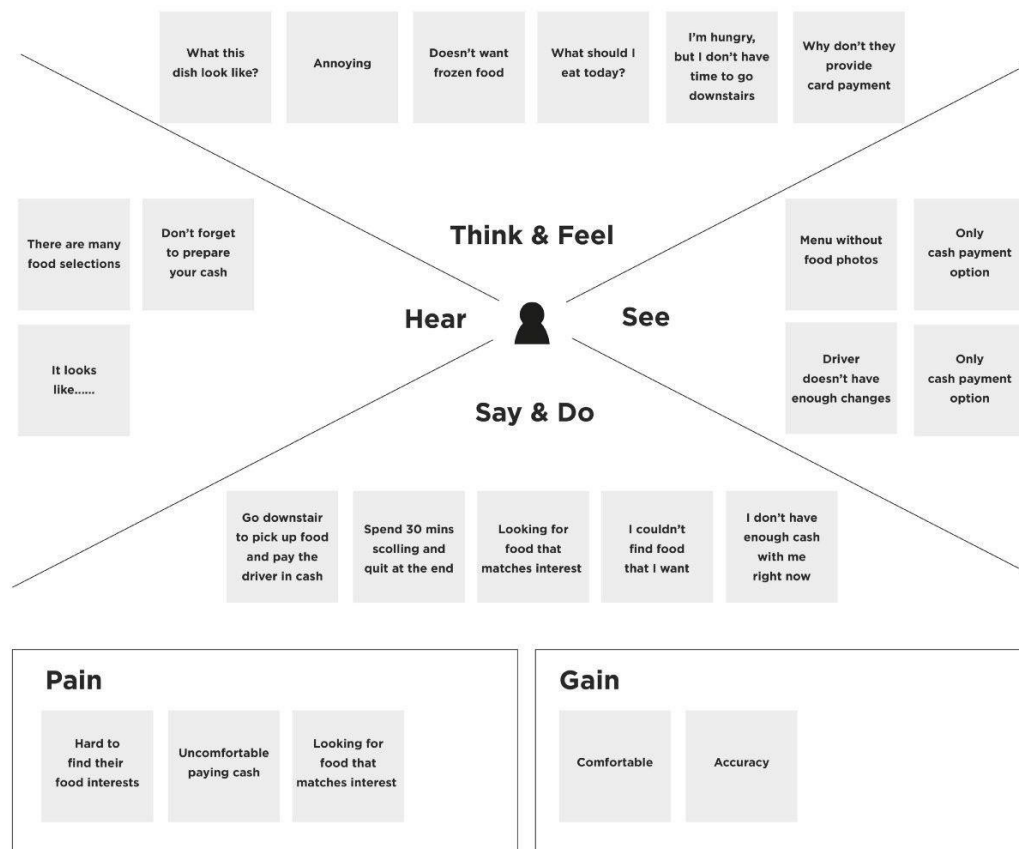

Example:

Empathy Map

Example: Food Ordering & Delivery Application

Empathy Map: Implement Client Script & UI Policy (Incident)

User: ServiceNow service desk agent / incident manager

Says

- "Incidents keep coming in with missing details."
- "I need to know who owns high impact tickets."

Thinks

- Incomplete data hurts triage, routing and SLA compliance.
- Rules should be enforced by the form, not by memory.

Does

- Creates and updates Incidents daily.
- Edits fields directly in list views to save time.

Feels

- Frustrated by inconsistent records.
- Anxious about missed SLAs on High impact incidents.

Pains

- High impact incidents saved without Assigned To.
- Urgency not matching Impact.

- State changed from list view without checks.

Gains

- Mandatory fields enforced automatically.
- Urgency auto-set for High impact.
- Cleaner, reliable data for reports.
