

Project Design Phase-II Data Flow Diagram & User Stories

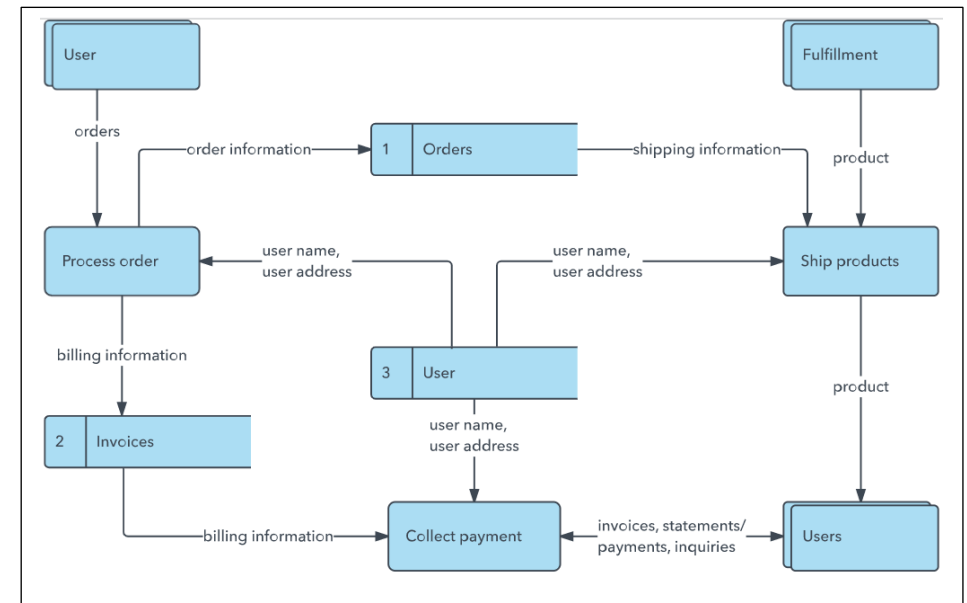

Date	30 September 2026
Team ID	SWTID-2026-5468
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

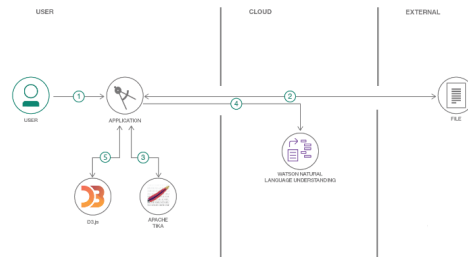

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: [\(Simplified\)](#)

Example: DFD Level 0 (Industry Standard)

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Service Desk Agent	High Impact Control	USN-1	As a service desk agent, I can see Assignment group become mandatory when Impact is High, so that high impact incidents are always routed.	Assignment group is mandatory when Impact = 1 - High	High	Sprint-1
Service Desk Agent	High Impact Control	USN-2	As a service desk agent, I cannot edit Urgency while Impact is High, so that it stays consistent with the impact.	Urgency is visible but read-only when Impact = High	High	Sprint-1
Service Desk Agent	Auto Urgency	USN-3	As a service desk agent, I want Urgency to be set to High automatically when I set Impact to	Urgency changes to 1 - High as soon as Impact is	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
			High, so that I do not have to set it manually.	set to High		
Service Desk Agent	Auto Urgency	USN-4	As a service desk agent, I want to see a message when Urgency is set automatically, so that I know why the value changed.	Message "Urgency set to High for High impact incident." is displayed	Medium	Sprint-1
Service Desk Agent	Save Validation	USN-5	As a service desk agent, I am prevented from saving a High impact incident without Assigned To.	Error message is shown on Assigned To and the record is not saved	High	Sprint-2
Service Desk Agent	Save Validation	USN-6	As a service desk agent, I can save a High impact incident once Assigned To is filled.	Record saves successfully with no errors	High	Sprint-2
Service Desk Agent	Reverse Condition	USN-7	As a service desk agent, when I change Impact from High to Medium, the restrictions are removed.	Assignment group not mandatory, Urgency editable, record saves	Medium	Sprint-2
Service Desk Agent	Form Update	USN-8	As a service desk agent, I can update State from the Incident form.	State change made on the form is saved successfully	Medium	Sprint-2
Incident Manager	Data Quality	USN-9	As an incident manager, I want every High impact incident to have an owner, so that triage, SLA tracking and reporting are accurate.	No High impact incident can be saved without Assigned To	High	Sprint-2
Administrator	List Edit Restriction	USN-10	As an administrator, I want State changes blocked in the list view, so that State is only changed through the form.	Alert is shown and the State value remains unchanged	Medium	Sprint-2

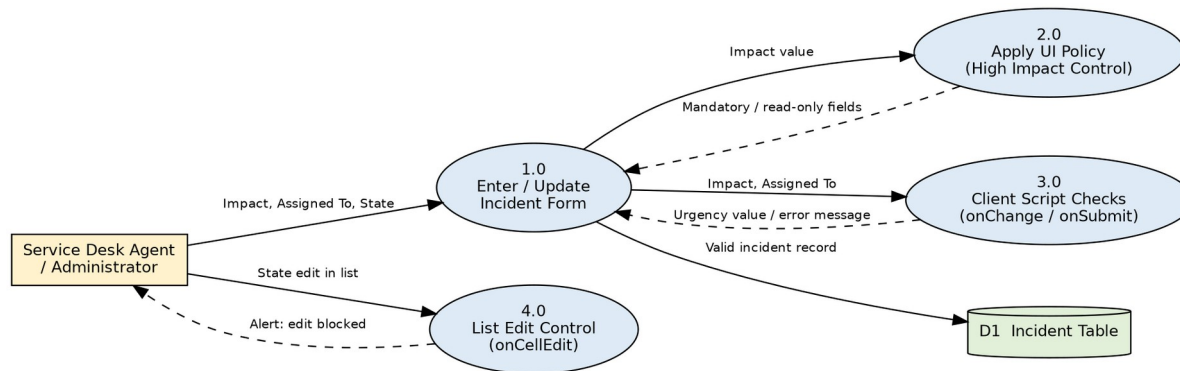

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	Configuration	USN-11	As an administrator, I can configure the UI Policy and Client Scripts from System UI, so that the rules can be maintained.	UI Policy and Client Scripts are active and listed under System UI	Medium	Sprint-1
Administrator	Testing	USN-12	As an administrator, I can run the defined test scenarios to confirm all rules work together.	Mandatory, successful save, reverse condition, list edit and form update tests all pass	Low	Sprint-3

Project Data Flow Diagram - Level 0:

At Level 0 the whole solution is one process. The user provides incident details, the process controls field behaviour and validates the data, and only valid records reach the Incident table.

Project Data Flow Diagram - Level 1:

- 1.0 Enter / Update Incident Form: receives Impact, Assigned To and State from the user and passes them to the checks.
- 2.0 Apply UI Policy: uses the Impact value to make Assignment group mandatory and Urgency read-only, and reverses this when Impact changes.
- 3.0 Client Script Checks: onChange sets Urgency; onSubmit returns an error message when Assigned To is missing for High impact.
- 4.0 List Edit Control: onCellEdit blocks State edits made in the list and shows an alert.
- D1 Incident Table: stores only records that pass the checks.
